High-speed, 1-needle, Lockstitch, Fagoting Machine

# • LZ-2282N / LZ-2282N-7

#### Productivity is dramatically increased

LZ-2285N

The machine incorporates a built-in lower knife that trims only the lower material. This allows the machine to simultaneously attach lace to the body of the foundation and trim only the body during processes to attach lace to the bottoms or tops of slips or to the joint seam lines of shorts.

#### The machine demonstrates consistent trimming performance

The knife is driven by a motor that runs independently from the sewing machine motor. With this feature, the knife can continue to run at a high speeds during trimming even when the speed of the machine is reduced during startup or when sewing curved sections. Furthermore, the knife is placed just beside the needle to provide a constant trimming width even on the curved sections.

## • LZ-2284C-7

This is a cylinder-bed, lockstitch zigzag stitching machine based on the LZ-2284N-7 model. The cylinder-bed more than adequately facilitates the handling of tubular sewing products in circular sewing processes, thereby contributing to increased productivity and upgraded seam quality. This zigzag stitching machine is best suited to the attaching or counter stitching of elastic tape

The sewing machine provided with an anti-material-slip function, which promises more beautifully finished seams, is included in three different model lineups.

# **LZ-2280NU** LZ-2284NU LZ-2284NU-7

High-speed, 1-needle, Lockstitch, Zigzag Stitching Machine with Anti-material-slip type

High-speed, 1-needle, Lockstitch, Zigzag Stitching Machine with Anti-material-slip type (with standard/3-step zigzag stitching pattern changeover function)

High-speed, 1-needle, Lockstitch, Zigzag Stitching Machine with Anti-material-slip type (with standard/3-step zigzag stitching pattern changeover function and automatic thread trimmer)

#### Uneven feed of the upper and lower cloths is totally eliminated

With its newly developed feed mechanism, the machine prevents "uneven feed of the upper and lower cloths" when sewing girdles and body suits made of slippery, elastic materials.

#### Simplified mechanism for easy operation

Drop-feed sewing machines are widely said to feed in the lower cloth more quickly than the upper cloth. However, this machine prevents uneven feed of the upper and lower cloths in spite of its a drop-feed mechanism. In appearance, the gauge parts are identical to those of a conventional zigzag stitching machine, and operability is in no way affected by the newly developed feed mechanism.

Conventional machine

LZ-2280NU series
