

Busche Software Solutions: BSS-TRM-1

Digital Management of tension rollers guided by electronic motors

Customized application software for the digital management of tension rollers guided by electronic motors. For multiple use in lingerie and sportswear as well as in medical textiles.

The Busche Software Solution: BSS-TRM-1

Description

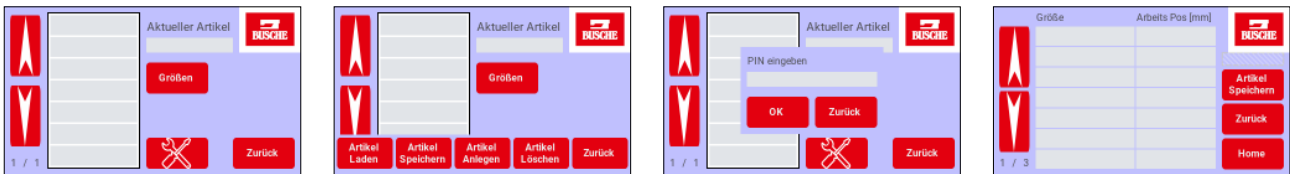

Based on a modular software database individual application solutions are build for each and every application of the sewing process. Positioning of the tension rollers possible based on weight, size as well as length. Easy handling is guaranteed due to self-explanatory frontend design and multiple language possibility.

Corresponding hardware solutions – based on Festo technology – are offered by Busche Solutions.

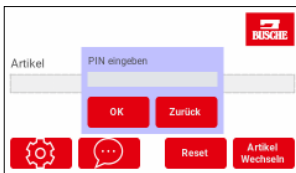

Areas of application

All sewing applications which demand the use of tension rollers.
